

Detailed Daily Training Diary – SOC Analyst Intern (DLP)

Training Duration: 05 January 2026 – 05 July 2026

Department: Cybersecurity Operations Center (SOC)

Role: SOC Analyst Intern – DLP / DSPM

Working Days: Monday to Friday (Saturday & Sunday Off)

JANUARY 2026

Initial Cybersecurity & SOC Training Phase

05 January 2026

Today was my first day in the organization as a SOC Analyst Intern (DLP). I attended the cybersecurity team's onboarding session. The session included an introduction to the company's security operations, policies, confidentiality requirements, and internal workflows. I was introduced to the SOC environment, analyst responsibilities, and security monitoring procedures followed by the team.

06 January 2026

Learned the fundamentals of cybersecurity including Confidentiality, Integrity, and Availability (CIA Triad). Understood different types of cyber threats such as malware, phishing, ransomware, insider threats, and social engineering attacks. Also learned how organizations implement security controls to protect sensitive data.

07 January 2026

Studied the structure and workflow of a Security Operations Center (SOC). Learned about alert monitoring, incident categorization, escalation matrix, and ticketing systems. Understood the responsibilities of Level 1, Level 2, and Level 3 SOC analysts.

08 January 2026

Received training on SIEM concepts and log management processes. Learned how security logs are collected from endpoints, servers, firewalls, and applications. Studied how SIEM tools correlate events and generate alerts based on suspicious activities.

09 January 2026

Learned Windows operating system fundamentals including user accounts, event logs, services, processes, and authentication mechanisms. Practiced reviewing Windows Event Viewer logs and identifying failed login attempts.

12 January 2026

Studied networking fundamentals such as IP addressing, subnetting, DNS, DHCP, TCP/IP model, ports, and protocols. Understood the role of firewalls and network devices in cybersecurity monitoring.

13 January 2026

Attended a session on phishing attacks and email security. Learned how phishing emails are identified based on suspicious URLs, spoofed domains, attachments, and social engineering techniques. Reviewed examples of phishing campaigns.

14 January 2026

Received introduction to Microsoft Sentinel SIEM platform. Learned about workspaces, connectors, dashboards, analytics rules, and alert monitoring. Observed how incidents are created from correlated events.

15 January 2026

Observed senior analysts monitoring live alerts in the SOC dashboard. Learned how alerts are triaged and validated before escalation. Understood the importance of accurate incident documentation.

16 January 2026

Practiced reviewing authentication logs and identifying suspicious login behavior such as multiple failed logins and unusual access patterns. Learned basic investigation methodology.

19 January 2026

Received training on Endpoint Detection and Response (EDR) concepts using SentinelOne. Learned how EDR solutions monitor endpoint activities, detect malicious behavior, and generate security alerts.

20 January 2026

Studied alert severity classifications including low, medium, high, and critical severity incidents. Learned how analysts prioritize alerts based on business impact and risk level.

21 January 2026

Introduced to the MITRE ATT&CK framework and its role in cybersecurity investigations. Learned about tactics, techniques, and procedures (TTPs) used by threat actors.

22 January 2026

Reviewed firewall logs and network traffic monitoring concepts. Learned how blocked connections, unusual outbound traffic, and suspicious IP communication are analyzed.

23 January 2026

Observed the SOC incident management workflow. Learned how incidents are assigned, escalated, documented, and resolved using internal ticketing systems.

27 January 2026

Studied identity and access management concepts including MFA, privileged accounts, password policies, and user authentication controls.

28 January 2026

Received training on email security gateways and spam filtering mechanisms. Learned how malicious attachments and suspicious URLs are detected.

29 January 2026

Practiced preparing investigation notes and documenting technical observations clearly. Learned proper incident reporting standards followed by the SOC team.

30 January 2026

Reviewed various SIEM alerts and observed how analysts differentiate between true positives and false positives during investigations.
