

Detailed Daily Training Diary – SOC Analyst Intern (DLP)

Training Duration: 05 January 2026 – 05 July 2026

Department: Cybersecurity Operations Center (SOC)

Role: SOC Analyst Intern – DLP / DSPM

Working Days: Monday to Friday (Saturday & Sunday Off)

APRIL 2026

DSPM Monitoring & Advanced DLP Operations

01 April 2026

Today I started working on DSPM (Data Security Posture Management) monitoring activities along with regular DLP operations. Received an overview of how DSPM solutions help organizations identify, classify, and monitor sensitive data stored across endpoints, servers, databases, and cloud environments. Learned the difference between data-in-motion monitoring through DLP and data-at-rest monitoring through DSPM solutions.

02 April 2026

Worked on reviewing sensitive data discovery scan results generated through the DSPM platform. Learned how DSPM tools identify confidential information such as employee records, financial documents, customer information, and internal business files stored across different repositories. Observed how scan results are categorized based on sensitivity level and exposure risk.

03 April 2026

Studied cloud storage monitoring concepts and reviewed risks associated with exposed cloud repositories. Learned how improper permissions, public file sharing, and unrestricted access can lead to sensitive data exposure. Reviewed examples of cloud storage findings involving confidential documents with excessive access permissions.

06 April 2026

Analyzed DSPM findings related to sensitive data exposure in shared folders and internal storage locations. Learned how analysts validate whether detected files actually contain sensitive information or if the findings are false positives. Assisted in documenting observations and updating exposure tracking sheets.

07 April 2026

Worked on identifying risky access permissions assigned to confidential files and folders. Learned how over-permissioned access increases insider threat and accidental exposure risks. Reviewed examples where sensitive files were accessible to unnecessary users or departments.

08 April 2026

Studied organizational data governance standards and compliance-related monitoring practices. Learned the importance of protecting regulated data such as PII, financial records, and confidential business information. Reviewed how compliance frameworks influence DLP and DSPM monitoring activities.

09 April 2026

Monitored incidents involving unauthorized access attempts to sensitive files and restricted storage locations. Learned how abnormal access patterns and unusual user behavior can indicate potential insider threats or policy violations. Assisted in reviewing access logs and validating suspicious activities.

10 April 2026

Worked on validating DSPM scan results generated for cloud storage repositories. Learned how analysts review file classifications, ownership details, permission settings, and data sensitivity before confirming exposure findings. Assisted in updating remediation tracking records for identified issues.

13 April 2026

Reviewed remediation recommendations provided for exposed sensitive data findings. Learned how organizations reduce exposure risk by modifying permissions, encrypting files, restricting sharing, and removing unnecessary access rights. Observed how remediation activities are tracked until closure.

14 April 2026

Received advanced training on regex creation and optimization for DLP detection. Practiced creating regex patterns for employee IDs, PAN numbers, Aadhaar numbers, phone numbers, and financial records. Learned how optimized regex improves detection accuracy while reducing false positives.

15 April 2026

Worked on DLP policy tuning activities to improve monitoring efficiency. Reviewed policies generating excessive alerts and learned how analysts modify detection conditions, confidence

thresholds, and exclusions to improve policy performance. Assisted in testing updated policy configurations in a controlled environment.

16 April 2026

Monitored incidents involving spreadsheet files containing confidential organizational information. Reviewed incidents generated through endpoint and email channels where users attempted to transfer sensitive files externally. Learned how analysts verify data sensitivity and assess the risk level associated with incidents.

17 April 2026

Reviewed endpoint activity logs and monitored suspicious user actions involving sensitive file handling. Learned how endpoint monitoring solutions track file copy operations, print activities, clipboard usage, and local file transfers. Assisted in correlating endpoint events with DLP incidents.

20 April 2026

Studied insider threat monitoring concepts and behavioral indicators. Learned how unusual file access patterns, excessive downloads, repeated policy violations, and unauthorized sharing attempts can indicate malicious or negligent user behavior. Reviewed example scenarios handled by the SOC team.

21 April 2026

Prepared investigation notes for escalated DLP incidents involving confidential data exposure. Learned proper documentation practices including incident timeline creation, evidence recording, user activity analysis, and remediation recommendations. Assisted in updating incident tickets with investigation summaries.

22 April 2026

Participated in troubleshooting endpoint DLP agent-related issues. Learned how communication failures, outdated agents, and policy synchronization problems can affect monitoring accuracy. Assisted the technical team in validating agent connectivity and policy updates on test systems.

23 April 2026

Reviewed cloud application monitoring concepts and received an introduction to CASB (Cloud Access Security Broker) functionality. Learned how cloud applications are monitored for unauthorized uploads, file sharing activities, and risky user behavior. Observed how DLP integrates with cloud security controls.

24 April 2026

Worked on validating DSPM alerts associated with exposed confidential files. Reviewed exposure findings involving financial reports, HR documents, and internal business data. Learned how analysts assess exposure severity based on data type, access permissions, and sharing status.

27 April 2026

Monitored suspicious file-sharing activities involving external recipients and cloud platforms. Reviewed incidents where users attempted to upload restricted files outside the organization. Assisted in validating business justifications and identifying policy violations requiring escalation.

28 April 2026

Prepared operational reports summarizing daily DLP and DSPM monitoring activities. Included reviewed incidents, escalations, false positives, remediation updates, and exposure findings. Learned the importance of maintaining accurate operational records for audit and compliance requirements.

29 April 2026

Reviewed endpoint policy violations involving confidential project documents and sensitive internal reports. Learned how repeated policy violations are tracked for trend analysis and risk identification. Assisted in documenting recurring user behavior patterns observed during monitoring activities.

30 April 2026

Prepared a detailed monthly summary report covering DLP and DSPM operations performed throughout April 2026. The report included incident statistics, policy tuning activities, false-positive reduction efforts, exposure findings, escalated cases, and remediation-tracking updates. Discussed operational observations and improvement areas with senior analysts during the monthly review meeting.
