

Detailed Daily Training Diary – SOC Analyst Intern (DLP)

Training Duration: 05 January 2026 – 05 July 2026

Department: Cybersecurity Operations Center (SOC)

Role: SOC Analyst Intern – DLP / DSPM

Working Days: Monday to Friday (Saturday & Sunday Off)

MAY 2026

Incident Investigation, Policy Optimization & Advanced DLP Operations

01 May 2026

Holiday observed for Labour Day. No operational activities were performed today.

04 May 2026

Today I worked on detailed investigation of DLP incidents involving sensitive file transfers through endpoint and email channels. Reviewed incidents where confidential organizational documents were attempted to be shared externally. Learned how analysts examine user activity logs, policy triggers, file contents, and transfer destinations before validating incidents. Assisted in documenting investigation observations and updating incident tracking records.

05 May 2026

Reviewed incidents related to exposure of financial records, employee information, and internal business documents. Learned how DLP systems classify incidents based on sensitivity type and policy severity. Observed how analysts determine whether incidents represent accidental violations, business-approved activities, or potential insider threats. Participated in incident validation discussions with senior analysts.

06 May 2026

Worked on creating and testing regex patterns used for detecting sensitive information within DLP policies. Practiced creating regex for employee IDs, account numbers, phone numbers, PAN numbers, and organizational identifiers. Learned how optimized regex conditions improve detection coverage while minimizing false positives generated during monitoring.

07 May 2026

Monitored email channel incidents involving confidential attachments and sensitive content transfers. Reviewed triggered policy conditions and analyzed sender-recipient communication patterns. Learned how analysts validate incidents by reviewing attachment contents, business requirements, and policy matching details before escalation or closure.

08 May 2026

Updated internal documentation related to DLP alert handling workflows and investigation procedures. Learned the importance of maintaining accurate operational documentation for consistency, auditing, and analyst reference purposes. Assisted in documenting common investigation steps and incident classification guidelines followed within the SOC environment.

11 May 2026

Reviewed incidents involving uploads of confidential files to external cloud storage platforms and collaboration tools. Learned how web and cloud DLP monitoring helps identify unauthorized sharing activities. Assisted in validating incidents involving external file-sharing attempts and documenting investigation findings.

12 May 2026

Studied Forcepoint DLP policy hierarchy and enforcement structure in detail. Learned how policies are configured using conditions, rules, channels, and actions. Observed how different policies are applied for endpoint, email, and web monitoring environments. Reviewed examples of policy precedence and enforcement behavior.

13 May 2026

Monitored endpoint DLP incidents involving removable media usage and unauthorized file copy attempts. Reviewed user activities related to USB devices and external storage media. Learned how endpoint DLP agents monitor file movement, clipboard usage, printing activities, and local data transfers on monitored systems.

14 May 2026

Worked on false positive reduction activities by reviewing repetitive alerts generated through existing DLP policies. Learned how analysts implement exclusions, exception rules, and refined detection logic to improve monitoring efficiency. Assisted in identifying commonly triggered false positive patterns during incident reviews.

15 May 2026

Prepared incident summary reports containing details of escalated incidents, policy violations, investigation status, and remediation recommendations. Learned how operational reports help management teams track incident trends and security risks. Assisted in maintaining daily operational metrics related to DLP monitoring activities.

18 May 2026

Reviewed incidents involving confidential healthcare-related information and personally identifiable information (PII). Learned how regulated data categories require stricter monitoring and handling procedures. Observed how analysts validate incidents involving sensitive healthcare records and confidential customer information.

19 May 2026

Received practical exposure to advanced incident investigation techniques used during DLP operations. Learned how analysts correlate endpoint logs, SIEM alerts, email activities, and user actions to understand the complete incident timeline. Assisted in reviewing historical incident data for ongoing investigations.

20 May 2026

Worked on validating DLP alerts against business justifications provided by users. Learned how approved business activities can sometimes trigger DLP policies even though no malicious intent exists. Observed how analysts verify authorization approvals and document investigation conclusions appropriately.

21 May 2026

Reviewed endpoint file transfer logs and user activity records associated with policy violations. Learned how analysts identify risky user behavior patterns such as repeated violations, excessive downloads, and unauthorized sharing attempts. Assisted in documenting observations related to suspicious user activities.

22 May 2026

Updated incident handling documentation and operational tracking sheets used by the DLP team. Learned how accurate documentation supports auditing, compliance reviews, and operational continuity. Assisted in organizing incident records and maintaining updated investigation references.

25 May 2026

Participated in an internal knowledge-sharing session focused on DLP operational practices and emerging security challenges. Topics included insider threat detection, cloud monitoring risks, policy optimization strategies, and reducing alert fatigue within SOC operations. Learned practical approaches followed by experienced analysts.

26 May 2026

Monitored incidents involving sensitive customer information and confidential business data. Reviewed incidents generated through endpoint and email monitoring channels. Learned how analysts assess the severity of incidents based on data sensitivity, transfer destination, and business impact.

27 May 2026

Reviewed incidents generated through cloud application monitoring and CASB-integrated environments. Learned how cloud applications are monitored for risky sharing activities, unauthorized uploads, and sensitive data exposure. Assisted in validating suspicious cloud-related activities identified during monitoring.

28 May 2026

Prepared weekly operational reports containing incident statistics, escalations, false positives, remediation activities, and policy updates. Learned how reporting helps management evaluate monitoring effectiveness and identify operational improvement areas within DLP operations.

29 May 2026

Studied MITRE ATT&CK techniques associated with data exfiltration and insider threat activities. Learned how tactics such as data staging, exfiltration over web services, removable media usage, and cloud uploads are mapped within the ATT&CK framework. Reviewed examples of how DLP incidents can align with MITRE ATT&CK techniques during investigations.
